

CAMPER TRAILER SOLAR PANELS

When camping we understand reliability is very important. We have designed a range of **Folding Solar Panel Kits** to reflect this.

Monocrystalline solar cells have been used to achieve a high efficiency.

Strong legs to help ensure the panel's stability.

The folding solar panel kits come with a complimentary padded carry bag with pocket. To help keep your panel in perfect condition each time you use it.

There is also a carry handle attached to the frame of the solar panel. A manual is inside the padded bag.

5 metre lead with anderson plugs a positive and a negative battery clip attached, connected to a regulator which controls the charging of your battery.

Two removable battery clips attached via an anderson plug. These kits can be hooked directly to the battery via the battery clips or through a Anderson plug connection.

It has a light to indicate the connection to the battery is correct and working. Also another light to indicate your battery's current charge status.

No Fuses to blow.

You can hook any solar folding/kit up to your battery incorrectly and no damage will occur to your battery or the folding solar panel kit.

But best of all, **NO** noise. Have your holiday in peace and quiet.
